

Project Requirement

We need to work on developing REST API endpoints of various functionalities required for a website (similar to Quora) and we need to create following endpoints.

// User Endpoints

1. *signup* - *"/user/signup"*
2. *signin* - *"/user/signin"*
3. *signout* - *"/user/signout"*
4. *userProfile* - *"/userprofile/{userId}"* // User Information
5. *userDelete* - *"/admin/user/{userId}"* //Admin User

//Question Endpoints

1. *createQuestion* - *"/question/create"*
2. *getAllQuestions* - *"/question/all"*
3. *editQuestionContent* - *"/question/edit/{questionId}"*
4. *deleteQuestion* - *"/question/delete/{questionId}"*
5. *getAllQuestionsByUser* - *"/question/all/{userId}"*

// Answer Endpoints

1. *createAnswer* - *"/question/{questionId}/answer/create"*
2. *editAnswerContent* - *"/answer/edit/{answerId}"*
3. *deleteAnswer* - *"/answer/delete/{answerId}"*
4. *getAllAnswersToQuestion* - *"/answer/all/{questionId}"*

Quick Action:

1. *Identify Team Leader within our team*
2. *Create a master repository for the project*
3. *Push the initial code stub and a team collaboration folder in the repo*
